

Abstract

An elongated tool (10) said tool-having opening at each end (14,42). Said first opening can be adjustable for colored dots or symbols. Said adjustments by any material can be held in place by glue or tape (14). Colored dots or symbols are used with shaded or colored card chart. (22), having approximately ½ inch shaded or bright colors or symbols. Said colored dots or symbols (30) are staggered throughout the card chart (22), said tool (10) is used to scan squares through opening (14) Said patient will speak where location dots or symbols (30) opening (14) tool (10). This timing coordinates the articulatory systems thus improving enunciation of words. Said second opening (42) located opposite end has lengths and height larger enough to read only one word, this will regulate rate of speed enabling patient to pronounce words more clearly.
